Suggest Edit

Asked in: Microsoft (/search/?q=Microsoft)

Given a string **A** representing an absolute path for a file (Unix-style).

Return the string A after simplifying the absolute path.

Note:

1. Absolute path always begin with '**/**' (root directory).

2. Path will not have whitespace characters.

Input Format

```
The only argument given is string A.
```

Output Format

```
Return a string denoting the simplified absolue path
```

For Example

```
Input 1:
    A = "/home/"
Output 1:
    "/home"

Input 2:
    A = "/a/./b/../../c/"
Output 2:
    "/c"
```
